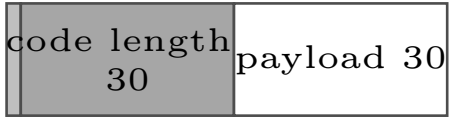
(a) CLIR package, 63 B

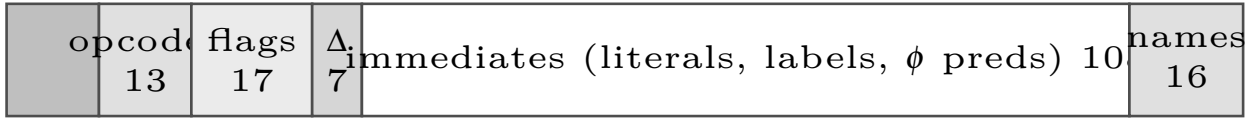
magic `CLIR` + version 5 B; pool of 3 literals; function, block and per-block instruction counts 8 B

(b) CLIR + canonical Huffman, 62 B



input length (LEB128) and mode byte 2 B; 19 code lengths as a sparse list

(c) Columnar container, 174 B (flag 0: stored without entropy coding)



flag, magic and counts 8 B; stream length prefixes 5 B
