(a) CLIR package, 90 B

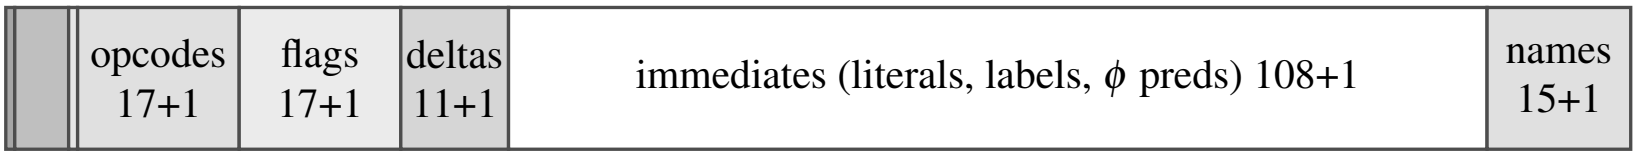

magic `CLIR` + version 5 B; LEB128 pool length, instruction count and body length 1 B each

(b) CLIR + static Huffman, 182 B

k (2 B), input length (4 B) and padding count (1 B) complete the 137-byte header

(c) Columnar container, 181 B (flag 0: stored without entropy coding)

flag 1 B, magic `SOAIR\x01` 6 B, count 1 B; “+1” is each stream’s LEB128 length prefix
